

BORDER: a core point is in reach
3 points in its ε -ball (needs 4)

$d(p, c) = 0.55 \leq \varepsilon$: a core is inside
 $\Rightarrow$ **p joins the cluster**

core

border

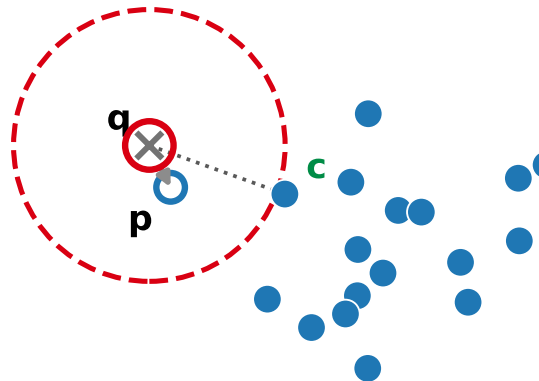

noise

the point's ε -ball

NOISE: only a border point is in reach
2 points in its ε -ball (needs 4)

$d(q, c) = 0.69 > \varepsilon$: no core is inside
 $\Rightarrow$ **q stays noise**
