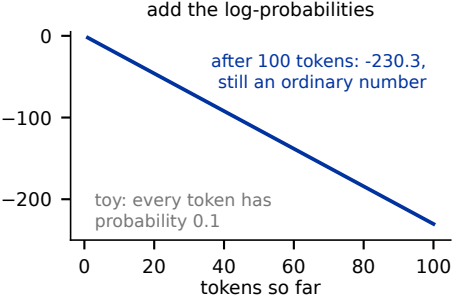
multiply the probabilities
1
10^{-25}
10^{-50}
10^{-75}
10^{-100}
token 46:
float32 says 0
true value
float32
0
20
40
60
80
100
tokens so far



add the log-probabilities
0
−100
−200
after 100 tokens: -230.3,
still an ordinary number
toy: every token has
probability 0.1
0
20
40
60
80
100
tokens so far
