this deck: the token table

row 3331

␣bank →

in "river bank"

row 3331

␣bank →

in "bank account"

one token in, one row out: the same row for both banks

an embedding model (search, RAG)

`We␣sat␣on␣the␣river␣bank` → all layers →

`I␣opened␣a␣bank␣account` → all layers →

a whole text in, one vector out, made from the last layer: similar texts get similar vectors
