

what the decoder would receive

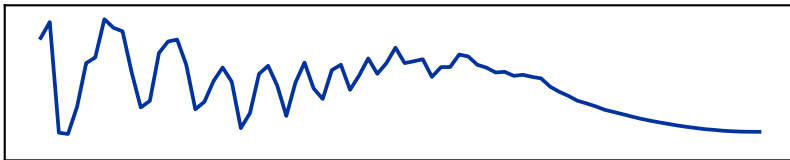

what is still LEFT OVER (the residual)

the frame itself

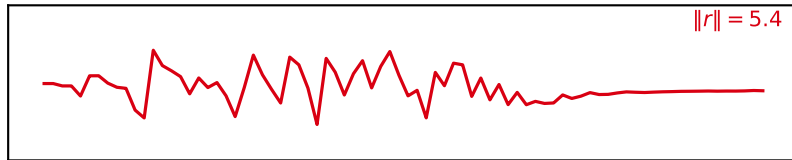

nothing quantized yet

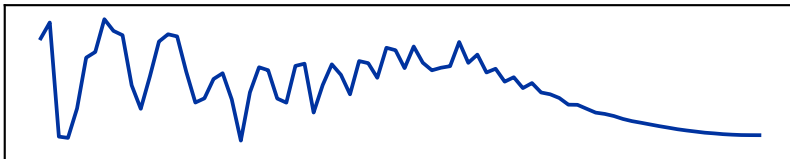

after level 1

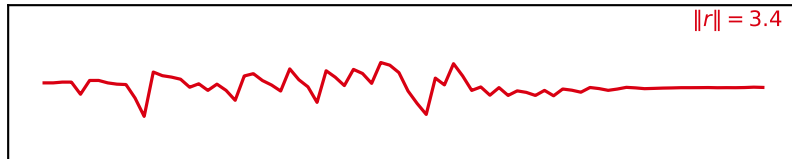

$\|r\| = 5.4$

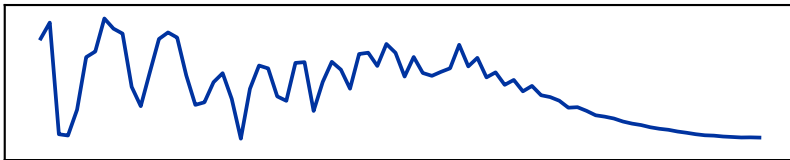

after level 2

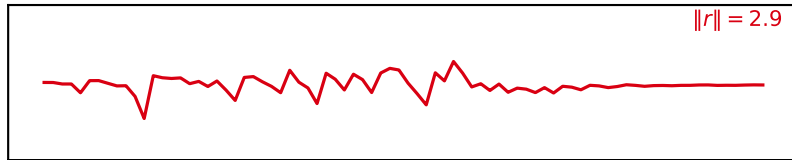

$\|r\| = 3.4$

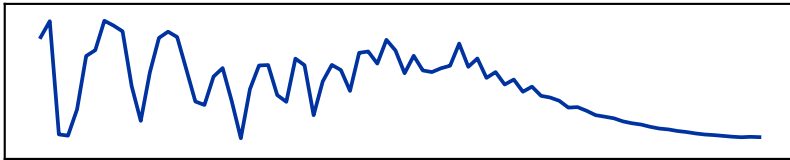

after level 3

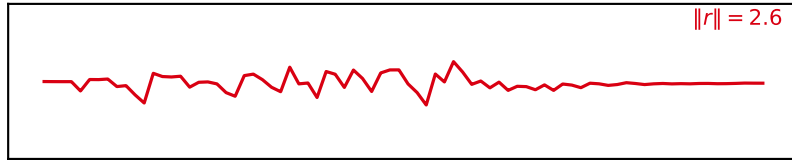

$\|r\| = 2.9$

after level 4

$\|r\| = 2.6$

Each level quantizes the previous level's mistake. The red curve is what the next level has to explain.
